STAT

Confirming our telephone conversation of today; I understand that the United States Air Force is possibly interested in a pressurized ball pen cartridge which will perform at very rapid speeds.

Enclosed are some preliminary samples of our new pressurized ball pen cartridge. Some of these samples have blue ink and some have black ink. Some of them contain a 1 millimeter ball and the others contain a 1.32 mm ball. We are also planning to make cartridges containing a .75 mm ball. And we are also working on inks with higher pigmentation.

In the meantime, if you will test the sample cartridges which we have enclosed and advise us of any further suggestions which you may have in regard to them we will be happy to try to work with you to solve your problem.
